

Signalization of a computer outage from the CM server allows to detect a non-communicating computer, or an erroneous internet line. It's based on communication initiated from the C-Monitor client's side, which contacts the CM Server every 15sec with about 80byte packet. Time is counted on the CM Server since last contact. If the time exceeds the interval entered for evaluation of connection outage, the public IP address for the given computer is immediately pinged, to find out whether has dropped the computer individually, or the whole internet line. Subsequently, error messages are generated from the CM Server.

Skip to [Ways of signalizing online connection outage errors](#)

Setup of monitoring of online connection outages

The very setup is realized after login to CM Portal, and it's realized for every PC or server individually. Open Admin zone, and in the left menu press "Computers"

Image: Vyhľadanie PC pre nastavenie kontroly online stavu

After finding a concrete computer or server, choose edit and press the tab Online connection

The option of outage notification is defaultly disabled, so it has to be turned on by switching the item "Warn of communication failures" to "Yes".

Image: Zapnutie upozorňovania na výpadky

After this change, set up testing of the line's availability by the last recognized IP address, from which the server was available. You can also set another fixed IP address, from which the server is available, or completely disable testing of the line's availability.

Image: Nastavenie testovania dostupnosti internetovej linky

Then, set repetition interval of the outage notifications, i.e. how often will be an email, resp. SMS, sent within duration of the outage of online connection with CM Server. If you enter 0, the warning will only be sent once. You have an option to prolong the interval 2x, in this case even the maximal

time interval.

Upozorňovanie na výpadky spojenia

Upozorňovať na výpadky

Áno

Testovať dostupnosť linky

Posledná zistená verejná IP

Upozornenie opakovať každých

15 min (0 = pošle sa iba raz pri vzniku poruchy)

Predlžovať interval 2x

☒ do 24 hod (0 = vypnuté)

Trvanie výpadku, po ktorom sa spustí notifikácia

3 min

Notifikáciu posielat' na adresy

Pridelený technik, ktorý nemá blokované emaily pre tohto zákazníka, dostáva email automaticky

Image: Nastavenie opakovania oznámení

Then set time of the online connection outage, after which will the notification launch (for servers is suitable a 3-5 minutes interval, as we assume occasional restarts etc.)

Usually, emails and SMS are sent to the assigned operator, though there's also an option to add other email addresses as well, e.g. to local IT workers etc. The address is entered into the text field

You can optionally set time when sending of the notifications is blocked, for instance weekends, during scheduled maintenance etc.

Časové blokovanie generovania poruchy výpadku spojenia:

Nový čas blokovania od 00:00 do 00:00 V dňoch ☐ Pon ☐ Úto ☐ Str ☐ Štv ☐ Pia ☐ Sob ☐ Ned

Pridať čas blokovania

Image: Zvolenie času blokovania oznámení

The last option is enabling, or disabling of sending SMS messages, which will begin to be sent when the outage occurs and also when it ends to selected phone numbers. Emails are sent automatically, sending of SMS has to be enabled. Sending of SMS is very convenient for servers and important work stations, which has to be nonstop available. This way, the operator is able to respond to an outage immediately after he receives the message. After pressing "Add SMS contact", you'll see a dialog to enter name of the contact, as well as his phone number, which must be entered in the international format, e.g. +421905123456

Operátori, ktorým budú posielané upozornenia o výpadku spojenia cez SMS:

☒ Pavol (+421905123456)

Ďalšie SMS kontakty, na ktoré budú posielané upozornenia o výpadku spojenia:

Nový kontakt

Tel. číslo

Pridať SMS kontakt

Telefónne čísla zadávajú v medzinárodnom tvare

Image: Pridanie SMS kontaktu

Ways of signaling online connection outage errors

If a computer loses online connection, the status appears in errors, the operator receives an email, possibly SMS if sending is enabled. According to the sent email / error, you can tell whether was lost connection of the entire internet line, or just a concrete PC. If it was only outage of connection with PC, value of the error is "Computer connectivity lost"

The screenshot shows the 'Poruchy' (Errors) section of the Customer Monitor interface. The 'Prehľadanie a Vyhodnotenie' tab is selected. The left sidebar has a 'Stav' button circled in red. The main table displays a list of errors, with one entry circled in red: 'Computer connectivity lost'.

X	Id	Úroveň	Trvanie poruchy	Popis poruchy	Vyhodnotená hodnota	Referenčná hodnota úrovne poruchy	CM-ID počítača	Meno počítača v sieti	Poslávateľ	Spoločnosť	
	13525485	3m 16s	Online, spojenie	Computer connectivity lost		Last connected: 20.05.2012 18:51:21	SEANB15	ELITEBOOK6930	Pavol	SEAL IT Services, s.r.o.	Detail

Image: Výpadok spojenia s PC bez výpadku int. linky

You'll also receive an email at start of the error, as well as when it ends. In the email after restore, you can also see PC uptime, so we can determine whether the PC was already restarted with no need for another watch.

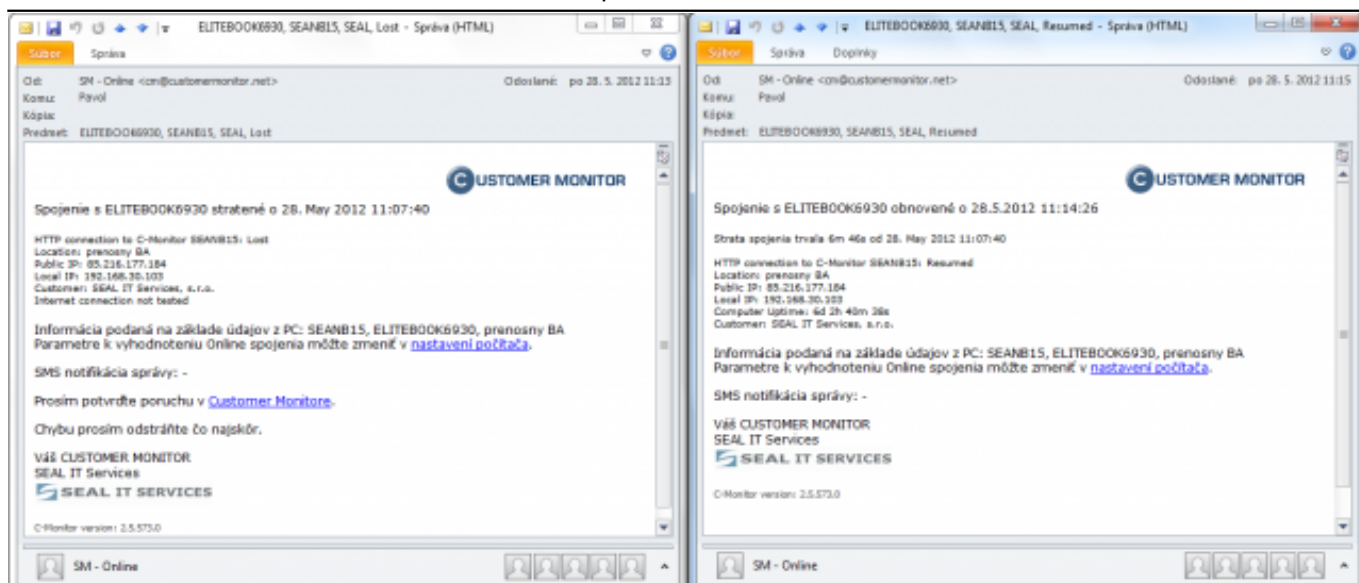

Image: Emailové hlásenie po strate a obnovení spojenia

If you've set monitoring of the internet line's availability, status in the error will be evaluated as lost of either the last known IP address of the internet line, or if you've entered a custom address, then it'll be connection lost of the manually entered IP address

Image: Výpadok spojenia PC s výpadkom int. linky

Similarly, you'll receive an email at start and end of the error. The email contains information about PC uptime, so you can determine, if the PC was restarted.

Image: Emailové hlásenie po strate a obnovení int.linky

Tip: Prevent notification of online connection outage from every computer individually when the entire internet connection fails

If you monitor more servers / computers from one connection, and don't want to receive notifications from every PC individually in case the whole line fails, activate monitoring of connection outage based on ping to IP address of the connection (**Testing of line availability** - [see above in this article](#)) for each computer. After this setup, CM Server will warn about the line's outage only from one computer (sometimes from two). Subject of the email about connection outage will of course begin with IP address of the connection.
