
Use CM at maintenance of software and licenses, when you need to:

Gain overview of the number and type of installed software

Without any extra work you'll gain overview of installed software, and also an information whether you need a license to it.

After entering purchase documents with licenses, you can figure out how many and what kinds of licenses you're missing

An overview of all software changes, which ran on computers at a certain time, is also available.

Take records of purchase documents to software

List of software purchase documents at one place

Take records of licenses and their validity

List of certificates to purchased software for quick searching

Evidence of serial numbers and product keys

Notification of license validity expiration

Accurate evidence of installed licenses

The CM records product keys of the most common MS products, what lets you to easily pair purchased license with the used device.

All licenses can be paired with devices and you will gain full overview of license usage

Customize your reports:

You have an option to change software classification for your management company due to objective reasons, and get more transparent reports this way

Note: Data for software evidence are gathered from Add and Remove programs and subsequently processed for the needs of SW audit. The default update is once a day.

Exact solutions are realized via Component:
